

Basic Arithmetic

by Sarena Hayer, 2007 India Volunteer Alum

Definition: arithmetic is the result of adding two or more numbers together

Topic #1: Counting Each Object One-by-One

For example:

$$\text{○} \text{○} + \text{○} \text{○} \text{○} =$$

To solve this problem, number each ring orally to count them up...

$$\text{○} \text{○} + \text{○} \text{○} \text{○} =$$

Count: "1.... 2.... 3.... 4.... 5...."

Use your fingers as you count the rings as a visual aid.

Exercises:

<u>Problems</u>	<u>Answers</u>
$\text{○} \text{○} \text{○} + \text{○} \text{○} \text{○} = \underline{\hspace{2cm}}$	6
$\text{△} + \text{△} = \underline{\hspace{2cm}}$	2
$\text{□} \text{□} \text{□} \text{□} + \text{□} \text{□} = \underline{\hspace{2cm}}$	6

More Exercises:

Problems	Answers
----------	---------

1	+	4	=			5	
3	+	4	=			7	
2	+	4	=			6	
2	+	3	+	1	=		6
4	+	5	+	1	=		10

Topic #2: Adding Two-Digit Numbers

Example: 14 + 11 = _____

write as 14
 + 11

To solve this problem, split the numbers into two separate columns and add each column.

$$\begin{array}{r} 1 \quad 4 \\ +1 \quad +1 \\ \hline 2 \quad 5 \end{array} = 25$$

Exercises:

Problems	Answers					
13	+	14	=			17
29	+	10	=			39
12	+	47	=			59

Topic #3: Carrying Over Sums

To add two digit numbers when the sum of the ones column exceeds 9, carry over the tens digit of the sum.

Example: $18 + 4 = \underline{\hspace{2cm}}$

write as

$$\begin{array}{r} 18 \\ +4 \\ \hline \end{array} \quad \Rightarrow$$

$$\begin{array}{r} 8 \\ +4 \\ \hline 12 \end{array}$$

(carry over the one to the tens column)

the one that is carried over $\Rightarrow 1$

$$\begin{array}{r} 18 \\ +4 \\ \hline 22 \end{array}$$

Exercises:

Problems	Answers
34 + 16 = _____	50
42 + 19 = _____	61
